AI-Powered Healthcare Accounts Receivable Follow-Up System

TEAM NAME : CHILL TECH

GLITCHCON 2.0

VIT CHENNAI | ECDS

PROBLEM STATEMENT

RCM team managing AR follow-up face challenges including:

- Large volumes of unpaid claims
- Delays in identifying claims requiring follow-up
- Manual payer communication processes
- Lack of prioritization of high-value claims
- Inefficient tracking of follow-up activities

GLITCHCON 2.0

VIT CHENNAI 15 ECDS VITAA

PROPOSED SOLUTION

We propose an AI-powered claim prioritization system that:

- Analyzes healthcare claim data
- Predicts the priority of claims (High / Medium / Low)
- Ranks claims based on urgency
- Helps billing staff identify which claims to follow up first

This improves efficiency and payment recovery rate.

GLITCHCON 2.0

VIT CHENNAI | ECDS

OBJECTIVES

- Build an AI system to analyze healthcare claim data
- Predict claim follow-up priority
- Reduce manual effort in AR management
- Provide a ranked list of claims for follow-up
- Improve healthcare financial operations

GLITCHCON 2.0

INNOVATION & USP

- AI-powered claim prioritization to identify high-risk unpaid claims.
- Multi-factor analysis using AR days, balance due, and follow-up history.
- Intelligent ranking for faster follow-up decisions.
- Reduces manual claim tracking for billing teams.
- Handles large claim datasets efficiently.
- Improves hospital revenue recovery by focusing on urgent payments.
